

Mining.

Lone Pine Mining Company.

Park City as a successful mining camp has in late years become a name to conjure with, and sensational strikes have become so common as to have received but little attention outside of local mining circles.

Among the recent properties which are receiving the attention of mining men in Park City and Salt Lake, none rank higher as prospects with sure high-producer contacts and magnificent surface indications than the possessions of the Lone Pine Mining company on Bonanza Flat, near the head of Snake river, of which C. M. Mair, now Sheriff of Summit county, is the efficient manager.

The most important reason for faith in permanency and high values of the Lone Pine properties is the fact that both of the well-known Silver King lime and quartzite contacts can easily be followed from the greatest of Park City producers and dividend payers to and through the Lone Pine claims lengthwise. The surface indications are acknowledged to be among the very best in the whole Park City camp. Work in the development of these claims is being pushed as rapidly as possible and in the most workmanlike manner. The company is entirely out of debt, with 55,000 shares of treasury stock, which may be disposed of if deemed advisable. The owners are running a tunnel which is almost entirely in ore, the ledge being a fissure running the length of the claims. The whole ledge is highly mineralized and it is only a question of early development when shipping ore will be assured throughout the workings. The company is very confident, and reasonably so, of a large ore body being tapped at the junction of the fissure with the contact, which is but a little over 100 feet distant from the face of the tunnel where work is now progressing. The Lone Pine is located a little southwest of the Daly-Judge and adjoins the Southern Tier on the south, from which high-grade ore has already been shipped immediately adjoining the Lone Pine lines. It also adjoins the Wolverine on the southwest, which is one of the most promising properties in the camp. The Lone Pine adjoins the Rochester on the east, which property has also shipped some very high grade ore, and lying as it does in the midst of paying properties in the best silver and lead camp in the Western world, it does not require an expert in mining affairs to predict it will, as soon as the contact is tapped, rank among the best properties in the camp.

A. H. Mayne, president of the Minola Mining company, whose properties are located in the Park City mining camp, adjoining the Silver King, has been at the mines this week arranging for the installation of new drills, compressor and boiler to be used in the development of the company's properties. They have nearly completed the new pipe line for handling the power to be used in sinking the shafts and Mr. Mayne reports that the work is being pushed as rapidly as possible, with a view of tapping and cross-cutting the main ore body, which they anticipate opening up at a depth of about two hundred feet.

Paymaster Mountney of the Daly West paid the company's regular dividend of 60 cents a share on Wednesday, amounting to \$108,000.

A good body of pyritic iron ore has made its appearance on the 1100 foot level of the Lower Mammoth at Tintic, while the silver contents have increased from 22 to 40 ounces, with fair showings of copper and gold.

The big tunnel of the Honerine mine is now in a little over 1500 feet and inside of the next ninety days it is anticipated to have tapped suf-

ficient ground to enable the owners to continue the triple apartment shaft downward as far as it may be desired to sink.

On Tuesday when the time to make the sales of delinquent stock of the Sampson's properties came around, there was not a share in sight, furthermore the 2 cent levy had been discharged in full while \$5000 has been added to the stock so that development work at Bingham will be continued indefinitely. As a number of fine ore exposures have been made it is likely that no further assessment will be made for some time to come.

It is authoritatively reported by a prominent mining engineer, who has recently examined the Nalldriver properties at Park City, that a fine showing of ore has been struck in the tunnel of the property, with a breast of high grade silver at a depth of 100 feet below the tunnel level.

Simon and Louis Bamberger left Wednesday evening for De La Mar, Nevada, where they will make a thorough inspection of the late developments in underground work in their mines at that point.

It has been decided to sink the main shaft on the properties of the Alaska Mining company 200 feet below the present lowest level of 450 feet. For the purpose of meeting this expense an assessment of 3 cents per share, or \$12,000, has been called by the directors of the company.

In honoring the victims of the witchcraft craze, in the latter part of the seventeenth century, we seem to be borrowing a suggestion from the members of a Western mob, who, discovering that they had hanged the wrong man, called on the widow and acknowledged that the laugh was on them.—Boston Transcript.
